

**FOR IMMEDIATE RELEASE:**

**MOBIGAGE® AND MOBIGAGE® PC ALLOW FOR MOBILE METROLOGY IN THE FIELD**

*- Revware's Offers the Ultimate Tools for Portable, Untethered Measurement –*

**RALEIGH, N.C., (May 13, 2011)** - Revware Inc., the leading developer of CAD-driven concept-to-product engineering software and manufacturer of the MicroScribe® portable measurement system, is proud to formally introduce MobiGage® and MobiGage® PC mobile software to their product portfolio. The applications act as “mobile gauges” and enable users to gather digitized measurement data from a MicroScribe via a wireless connection, completing the company's line of portable and untethered measurement solutions. Available for iPad, iPod Touch and iPhone, MobiGage sets the standard for "state of the art" mobile metrology. MobiGage PC provides the same features to Windows personal computer users.

“In keeping with our mission to provide simple to use, innovative and cost-effective modeling solutions, we are proud to set the bar in portable measurement software,” said Tom Welsh, President and CEO of Revware. “The MicroScribe digitizer is used across the world by a vast variety of designers, scientists, engineers and metrology professionals who benefit enormously from being able to use our measurement tools on the go.”

The MicroScribe portable digitizer is Revware's cornerstone product. Used in combination with Revware's own RevWorks® software, MobiGage, MobiGage PC or many of the other commercially available metrology programs on the market, the MicroScribe provides the ultimate solution for real-time data capture for modeling and analysis. MobiGage uses a wireless connection to manage data collection from one or more MicroScribes linked to a MobiBox® interface. MobiGage PC uses a direct USB connection. Users of either version can easily

and quickly capture a full range of part measurements or create, edit and run repeatable measurement plans for consistent production quality assessments.

**About Revware Inc.**

Revware™ provides MicroScribe® portable digitizers, peripherals and measurement software to a worldwide network of distributors and resellers. MicroScribe digitizers are supported by over 50 professional software applications and are integrated into the products of more than a dozen OEMs. Revware Inc. has provided digitizing hardware and CAD-driven concept-to-product engineering software, including RevWorks®, a SolidWorks® Gold partner application and MobiGage®, a product of Titansan Engineering, to the world market for nearly two decades.
